

WATER HAPPENS!
We Keep It From Happening!

Sump Watcher

**eliminate
water damage
&
protect your
basement...**

by automatically
turning your sump
pump on/off with
an Electronic Float!

Easy-to-Install!

Plug the **SumpWatcher** into a 115 VAC outlet, lower the sensor into the sump pit and secure it, plug the sump pump into the **SumpWatcher** control module n' Go.

What Does It Do?

The **SumpWatcher** is an "Electronic Float" that replaces the traditional float switch on a sump pump. Without any moving parts, it can't get stuck, corrode, wear out, or fail like a regular mechanical float switch. So, it will always turn on the sump pump when it's supposed to. The **SumpWatcher** does a lot more than just turn the pump on and off.

It monitors the motor current to the pump and will warn you if it is drawing too much current, a sign that the sump motor may be starting to fail. It will also alert you if it can't keep up with the incoming water flow because the discharge pipe is frozen, the pump is plugged, the impellar's damaged, or the pump motor was never plugged in. The **SumpWatcher** will test the pump motor every day, rain or shine, to make sure it's ready to go when it needs to. If it finds a problem, it will warn you. What better way to avoid a potential disaster and maintain peace of mind!

FEATURES	Sump
Controls Your Sump	✓
Prevents Water Damage	✓
Microprocessor Controlled	✓
Audible Alarm	✓
Signal Light	✓
Continually Monitors Motor	✓
Extends Sump Pump's Life	✓
Can Predict Motor Failure	✓
Fully Automatic	✓
No Batteries To Replace	✓
Patented Design	✓
UL Listed	✓
Warranty	5yr
