

WATER HAPPENS!
We Keep It From Happening!

Water • Watcher

The Water Detector

that **is more**
than an alarm...

it automatically **TURNS OFF** the
leaking appliance!

Easy-to-Install!

Plug the **WaterWatcher** into a 115 VAC outlet, place the sensor on the floor, plug the appliance that needs to be turned off into the **WaterWatcher** control module 'n Go.

What does it do?

The **WaterWatcher** is versatile in its ability to prevent water disasters. Its floor sensor is very sensitive and can detect many types of liquid (soap, pop, milk, and even the purest of water). When it does detect liquid where it's not supposed to be, the **WaterWatcher's** control module can turn off whatever is leaking. Like the inlet valve to the water cooler, the dishwasher, the washing machine, or the solenoid valve to the automatic coffee maker in your home or office, just to name a few. If a problem is detected, the **WaterWatcher** will NOT automatically reset itself. It will only reset itself after you plug it back in once the problem has been resolved. A "low cost" solution to avoid a "high cost" problem!

FEATURES	Water
Prevents Water Damage	✓
Microprocessor Controlled	✓
Audible Alarm	✓
Signal Light	✓
Turns Appliance Off	✓
No Batteries To Replace	✓
