

**WATER HAPPENS!**  
We Keep It From Happening!

# Washer Watcher

## Prevent laundry tub overflow BEFORE it happens...

by automatically turning your washer off before the tub overflows!

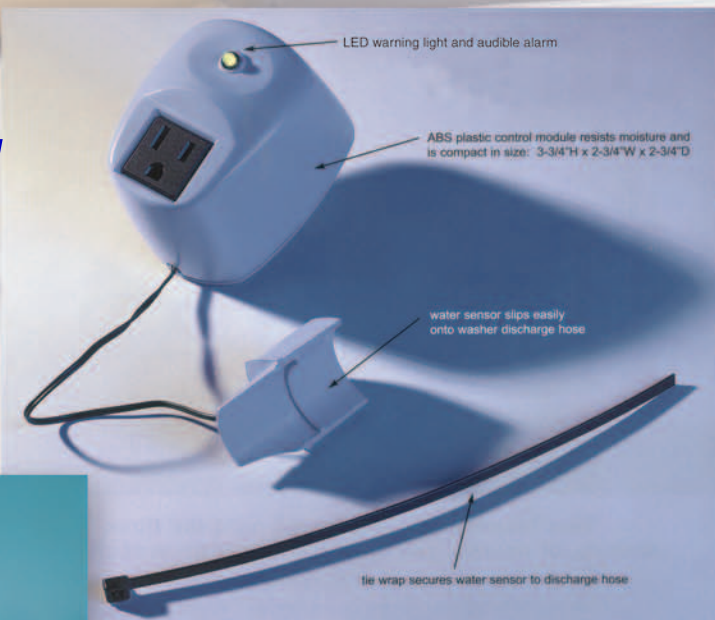

### Easy-to-Install!

Plug the WasherWatcher® into a 115 VAC outlet, secure the sensor to the end of the washer's discharge hose, plug the washer into the WasherWatcher control module n' Go.

### What Does It Do?

The WasherWatcher brings security and peace of mind to the laundry room. With the WasherWatcher installed, you can throw in a load of laundry 'n Go. You will never have to worry about having the laundry tub overflow because of a plugged drain. It's easy to plug a drain if a rag from the side of the laundry tub gets pulled down into the tub, someone left the plug in or set something in the tub, the drain is slow from lint buildup, or the lint trap fell off. If the WasherWatcher's sensor at the end of the discharge hose detects water, it will automatically **turn off the washing machine**. Catastrophe avoided. And, you don't have to worry about finding the reset button. There isn't one. It's all

FEATURES	Washer
Controls Your Washer	✓
Prevents Water Damage	✓
Microprocessor Controlled	✓
Audible Alarm	✓
Signal Light	✓
Turns Washer Off & On	✓
Works With All Washers	✓
Fully Automatic	✓
No Batteries To Replace	✓
Patented Design	✓
UL Listed	✓
Warranty	1yr

automatic. When the tub drains to a safe level, the controller **starts the washer back up again** so it can finish the wash cycle. It's special time delay feature will prevent the washing machine motor from turning on and off as the water drops to a safe level. Another inexpensive way to avoid a potential water disaster and maintain peace of mind!
